

Environmental Protection Policy Statement

As a global system service provider in the construction materials industry, Oriental Yuhong recognizes that energy conservation, emissions reduction, and environmental protection are not only part of our corporate social responsibilities but also essential for advancing the development of green building materials and addressing global climate change. We are committed to comprehensive resource utilization and ecological protection, striving to enhance energy and resource efficiency, reduce waste emissions, and foster new drivers of green growth. Through innovation and collaboration, we promote a transition toward resource-efficient and environmentally friendly practices across the industry, contributing to a more beautiful planet. Against this backdrop, Oriental Yuhong hereby issues the Environmental Protection Policy Statement. This policy applies to Oriental Yuhong, its subsidiaries, as well as contractors, suppliers, and other partners.

1. We strictly comply with environmental protection laws and regulations in China and in all countries and regions where we operate. We proactively identify ecological and environmental impact factors, continuously improve and optimize our environmental management system, and enhance our environmental protection standards.

2. We continuously promote cleaner production and optimize production processes to reduce emissions of air and water pollutants, hazardous waste, and general solid waste. We also enhance resource utilization and implement safe disposal practices to minimize or eliminate negative environmental impacts. Furthermore, we are committed to building “zero-waste factories” and green model production bases.

3. We optimize the use of energy, water, land, and other resources, establish circular resource utilization systems, and increase the proportion of recycled materials to reduce reliance on virgin resources and improve overall resource efficiency, promoting a circular economy. We also increase the proportion of clean and renewable energy in our operations, with the aim of establishing low-carbon and environmentally friendly production and operational systems.

4. We prioritize the use of low-carbon and eco-friendly raw materials, optimize green production processes, and provide sustainable, low-emission products. Our goal is to help customers reduce environmental impacts throughout product use and promote responsible consumption.

5. We support and strengthen biodiversity conservation, aiming to minimize or avoid any negative impact of our operations on rare species, their habitats, and ecological systems.

6. We collaborate closely with local governments and communities, actively organizing and participating in environmental and biodiversity protection education and outreach activities to enhance environmental awareness among employees and the public.

7. We regularly disclose our environmental performance and welcome oversight from investors and the wider public.
